VITAMINS

VITAMIN A

Helps maintain healthy eyesight and skin

VITAMIN D

Helps with mineral absorption and bone growth

VITAMIN E

Antioxidant that retards aging

VITAMIN K

Prevents blood clots and helps with protein metabolism

B1 (THIAMINE)

Essential for healthy nervous system function, assisting in the transmission of sensory signals

B2 (RIBOFLAVIN)

Participates in energy production

B7 (BIOTIN)

One of the most important vitamins for an animal's glossy hair and healthy skin, in addition to participating directly in healthy functioning of the nervous system

MINERALS

IRON

Participates in the synthesis that carries O₂ to blood and muscles

ZINC:

Contributes to skin, cell, and reproductive health

MANGANESE:

Participates in cartilage and skin formation

COPPER:

Contributes to the prevention and treatment of anemia

SELENIUM:

Helps reduce cell damage and boost immune response (antioxidant)

FAQS

1

For what pet breed/age is VN recommended?

Vital Nutrition is a complete wet food formulated to meet the nutritional needs of any adult breed of dog or cat (from 1 to 7 years old). In the case of dogs, it can be given to: adult dogs (from 1 to 7 years old), senior dogs (older than 7), and pregnant and/or lactating dogs.

In the case of cats, it can be given to: adult cats (from 1 to 7 years old), kittens (under the age of 1), senior cats (older than 7), or pregnant and/or lactating cats.

How much food should you give them per day? What is the recommended amount?

2

Our recommended exclusive daily amount for adults - without mixing with other food, that is, if you only give them this wet food - is:

CAT

30g OF FOOD

per kilogram of live weight

DOG

65g OF FOOD

per kilogram of live weight

3

Where can you buy Vital Nutrition?

Vital Nutrition can be purchased in the country's main supermarket chains, independent supermarkets, mini-supers, and pet supply stores.

FAQS

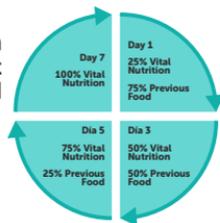

4

How should you make the change from your pet's current food to Vital Nutrition?

Three situations may occur:

1. If you are replacing wet food with Vital Nutrition wet food, you should mix one-third part VN with two-thirds part current food for the first 3 days. Then, starting on the fourth day and up to the sixth day, mix two-thirds part VN with one-third part current food. From the seventh day on you can give your pet the full ration of Vital Nutrition.

2. If you are replacing a fully dry diet with 100% Vital Nutrition, you should replace it gradually, not suddenly. We recommend you do so as follows for one week:

3. If your pet currently eats dry food and you want to mix it with Vital Nutrition, no adaptation period is needed. You can mix up to 30% VN into your pet's daily diet.
